Abstract

System and method for configuring a removable storage medium. An embodiment of the invention may comprise selecting a configuration for the removable storage medium, wherein logical sectors are consistently

5   identified for both an aware device and an unaware device. If the selected configuration is for the aware device, then a standard location for a file system indicator may be masked on the removable storage medium. If the selected configuration is for the unaware device, then the file system indicator may be copied from a non-standard location to the standard location

10   on the removable storage medium.
